1. Introduction

This document applies to the 23.4.3 version of the product.

This guide will help you to install KM – KNOWLEDGE Manager. This process should be done after installing all the licensing components (FlexLM and TRC Vendor Daemon).

Optionally, after installing KM – KNOWLEDGE Manager, you can find the installation process of the DB Migration Tool and how to use it.

2. KM – KNOWLEDGE Manager Installation Guide

There are two ways to install KM - KNOWLEDGE Manager:

- The most typical one is executing the installer with administration rights; an installation wizard will guide you to provide all the necessary parameters to perform the installation and at the end the tool will be installed.
- There is another way to install it from the command line, where all the parameters are provided beforehand, and the installation will be done without any further user interaction.

2.1 Download

First, download the KM – KNOWLEDGE Manager installer from the TRC website. Use your navigator to access <u>https://resources.reusecompany.com/downloads</u> and then look the version of the product you have licensed. Ask our support service if you need help to find it.

2.2 KM – KNOWLEDGE Manager installation with the Installation Wizard

Then, execute the installer:

• Select Setup Language: in this first window you can select the language of the installation wizard. You can choose between English and Spanish.

FIGURE 1

NOTE: This language selection is not the language that the KM – KNOWLEDGE Manager user interface will have. The KM – KNOWLEDGE Manager user interface language will rely on your Operating System language. You can always change it in Options button of the Connections window, or in the File menu of the KM – KNOWLEDGE Manager main window.

 Welcome: this window will introduce all the actions to be performed while installing the KM – KNOWLEDGE Manager application, you only have to read the instructions and click on the "Next >" button.

 License Agreement: this window will show the license agreement you will need to accept if you want to use the application. Please read it carefully before accepting it, then select the first option below the text and then click on the "Next >" button. However, if you do not agree, please click on the "Cancel" button; it will force the installation wizard to finish and it will not install the application.

License Agreement Please read the following important information before continuing.
Please read the following License Agreement. You must accept the terms of this agreement before continuing with the installation.
KNOWLEDGE Manager ^
Version 23.4
Binary Code License
 This Client license entitles you to use this software, but doesn't entitle to any kind of ownership upon it.

• License Server Selector: Here you must select the licensing mode contracted. There are two options: License Server and License Server with SES Server. Choosing each one, the next window will vary.

🕙 Setup - KNOWLEDGE Manager	—		×
License Server Selector Select a license server mode			
Choose one of the following licensing modes:			
Licence Server mode (default): require the license server an	nd port (exa	mple: flex	.).
Licence Servert with SES Server mode: using the licence se the SES Server, this mode allows logins auditing via SES Se		uration of	
O Licence Server			
Licence Server with SES Server			
< <u>B</u> ack	<u>N</u> ext >	Car	ncel

- OPTION 1: License Server: this window prompts you to introduce the licensing information needed to run the application. Consider the FlexLM installation and your deployment scenario to fill up this window.
 - The 'License Server' field corresponds to the machine name or IP address where the FlexLM is installed.
 - The 'Port' field refers to the PUBLIC port of the FlexLM service you have defined. As mentioned in the FlexLM service installation, two ports are used for the licensing server. The first port (or range) listens to license requests, and the second one opens a point-to-point connection to the TRC Daemon. In this field, the information required is the first setup, the public port.

	p - KNOWLEDGE Manager —

	Optional: Additional Server in format port@servername and comma separated (, Comma separated list, I.e: 27000@server2, 27000@server3

• OPTION 2: Systems Engineering Suite Server: This requests the same information, but without the optional field. You must select this option if you want to use the Audit Log feature included in SES Server. See Chapter 9 of SES Server: User Guide for more information.

- KNOWLEDGE Manager Security: this window allows selecting the authentication system used to log in to KM – KNOWLEDGE Manager. There are two options:
 - Using KM KNOWLEDGE Manager authentication system: the users are created and managed inside KM – KNOWLEDGE Manager.
 - Using Windows Authentication via using Active Directory items (users or groups): the login is delegated in rules on top of Active Directory items allowing or denying access to the tool.

This configuration is stored independently in each SES Ontology Database, which means that you can have two Ontology Databases with different authentication configurations. The first one using KM – KNOWLEDGE Manager security and the other using Windows Authentication, with the same KM – KNOWLEDGE Manager managing them.

This installation configuration cannot be changed later when using KM – KNOWLEDGE Manager. If you select Active Directory integration, then you cannot use KM – KNOWLEDGE Manager Security for the current installation, and the other way around. To undo this selection, KM – KNOWLEDGE Manager must be uninstalled from the computer and re-installed selecting the other option.

Finally, in the deployment where KM – KNOWLEDGE Manager users are all using Active Directory logins, there should be at least one installation with administrative permissions to create and manage the Active Directory authentication rules.

Choose your version in the window options.

 Completing the KM – KNOWLEDGE Manager Setup Wizard: this window appears when the installation has finished successfully to report this status. Please click on the "Finish" button, and the installation process will be complete.

FIGURE 14

2.3 KM – KNOWLEDGE MANAGER installation in silent mode

The command line with parameters to install KM – KNOWLEDGE Manager is:

```
KNOWLEDGEManagerSetup.exe /verysilent /licenseServer <your.host.name>
    /licensePort <portNumber> /canRememberCredentials <
    canRememberCredentials> [/additionalLicenseServers
    <port@servername1>,<port@servername2>,... /licenseCluster <0|1>
        /security AD /connectionsFile <filePath>]
```

IMPORTANT NOTE: Remember to open the command line window with administration rights, before executing the previous command.

Mandatory parameters:

- /verysilent: installation mode
- / licenseserver: FlexLM License Server hostname
- / licenseport: FlexLM License Server port

And the optional parameters for FlexLM high-availability mode are:

- /canRememberCredentials: allows the user to decide whether to save its credentials for the last connection used or not. The valid values for this parameter are:
 - o 0: DO NOT show the "Remember" check box in the login window
 - o 1: show the "Remember" check box in the login window
- /additionalLicenseServers: additional FlexLM servers in <port@servername> format and split by comma character (',')
- /licenseCluster: indicates FlexLM architecture according to:
 - o 0: set of non-related FlexLM servers
 - o 1: otherwise
- /security AD: using Active Directory items (users or groups) to log into KM. If this
 "/security AD" is not set, KM will use its own "KM KNOWLEDGE Manager
 Authentication System", which means that the KM Users will be created and managed
 inside KM KNOWLEDGE Manager.
- /connectionsFile: path to the file that contains the ontology database connections. Must contain the file extension. This can be absolute or relative path.

3. DB Migration Tool Installation Guide

3.1 Introduction

This guide will assist you through the DB Migration Tool installation. This process can only be done after installing all the licensing components (FlexLM and TRC Vendor Daemon).

There are two ways to install DB Migration Tool:

- The most typical one is executing the installer with administration rights; an installation wizard will guide to provide all the necessary parameters to perform the installation and at the end the tool will be installed.
- There is another way to install it from the command line where all the parameters are provided beforehand, and the installation will be done without any further user interaction.

3.2 Download

First, download the DB Migration Tool installer from the TRC website. Use your navigator to access <u>https://resources.reusecompany.com/downloads</u> and then look the version of the product you have licensed. Ask our support service if you need help to find it.

3.2.1 DB Migration Tool installation with the Installation Wizard

Then, execute the installer:

• Select Setup Language: this first window allows selecting the language of the installation wizard. You can choose between English and Spanish.

Select Se	tup Language	×
••	Select the language to use during the installation:	
	English English Español	~

FIGURE 15

 Welcome: this window will introduce all the actions to be performed while installing the DB Migration Tool application, please read the instructions and click on the "Next >" button.

FIGURE 16

 License Agreement: this window will show the license agreement you will need to accept if you want to use the application. Please read it carefully before accepting it, then select the first option below the text and then click on the "Next >" button. However, if you do not agree, please click on the "Cancel" button; it will force the installation wizard to finish and it will not install the application.

The REUSE Company

The REUSE Company is an organization specialized in the application of Semantic Representation and Analysis Technologies to a wide range of industries (Aerospace, Defense, Automotive, Naval, Health, ...). Our customers are usually (but not limited to) safety-oriented organizations.

Our focus is on System/Software Reuse, Traceability and Quality applied to all types of work-products throughout the whole SE lifecycle (requirements, SysML Models, physical models, tests cases, data results, manuals, natural language descriptions, fault trees, etc.). The integration of tools and technology from The REUSE Company facilitates the representation, analysis and exploitation of knowledge allowing for a knowledge-centric system engineering approach.

Our mission is to promote system/software and knowledge reuse within any organization, by offering processes, methods, tools and services that make it possible. We offer technology that is fully integrated within the organization's production chain.
